

```
=====
Tue 23 Jun 2026 07:23:17 - sadmlib_std_demo.py v3.27 - Library v4.69.1
Describe 'sadmlib_std_demo.py' here.
bilbo.maison.ca - User: root - Umask: 0018 - Arch: x86_64
Fedora Linux v43 - Kernel 7.0.12-101.fc43.x86_64 - SADMIN(C): /opt/sadmin
=====
```

01) SADMIN Python Library functions available to developer

[001]	sa.get_release()	SADMIN Release Number (XX.XX)	2.1.2
[002]	sa.get_ostype()	OS Type (In Uppercase, LINUX, AIX, MACOS)	LINUX
[003]	sa.get_osversion()	Return O/S Version (Ex: 7.2, 6.5)	43
[004]	sa.get_osmajorversion()	Return O/S Major Version (Ex 7, 6)	43
[005]	sa.get_osminorversion()	Return O/S Minor Version (Ex 2, 3)	
[006]	sa.get_osname()	O/S Distribution (In uppercase)	FEDORA
[007]	sa.get_oscodename()	O/S Project Code Name	N/A
[008]	sa.get_username()	Current User Name	root
[009]	sa.get_kernel_version()	Return O/S Running Kernel Version	7.0.12-101.fc43.x86_64
[010]	sa.get_kernel_bitmode()	Return O/S Kernel Bit Mode (32 or 64)	64
[011]	sa.phostname	Return Host Name	bilbo
[012]	sa.get_host_ip()	Return Host Main IP Address	192.168.1.23
[013]	sa.get_domainname()	Return Host Domain Name	maison.ca
[014]	sa.get_fqdn()	Return Fully Qualified Domain Name	bilbo.maison.ca
[015]	sa.get_serial()	Return System serial Number	L2HF78K0045
[016]	sa.get_epoch_time()	Return Current Epoch Time	1782213797
[017]	sa.epoch_to_date(1782213797)	Convert epoch time to date	2026.06.23 07:23:17
[018]	sa.date_to_epoch(wdate)	Convert Date to epoch time	1782213797
	DATE1 (End): 2026.06.30 10:00:44	DATE2 (Start): 2026.06.30 09:50:03	
[019]	sa.elapse_time(DATE1, DATE2)	Elapse Time between two timestamps	00:10:41
[020]	sa.get_packagetype()	Return package type (rpm, deb, lpp, dmg)	rpm
[021]	sa.get_arch()	Get system architecture	x86_64
[022]	sa.lock_system(hostname)	Lock the specified hostname (Not FQDN)	True
[023]	sa.lock_status(hostname)	Check if host specified is lock	True
[024]	sa.unlock_system(hostname)	Unlock host specified, monitoring on	True
[025]	sa.lock_status(hostname)	Check if host specified is lock	False
[026]	sa.write_log('message'[, lf=true])	Write message to Screen, Log or Both	message
[027]	sa.write_err('message'[, lf=true])	Write message to Error and Std Log	message
[028]	sa.sendmail(mail, sub, body, attach)	sadm_sendmail(email, "subject", "body_file", "file1, file2")	
[029]	sa.show_version(sa.ver)	Show Program & Library version & Desc.	script -v
[030]	sa.sleep(60, 15)	Sleep 60 sec & update every 15 sec.	60...45...30...15...0
[031]	sa.trimfile(filename, nlines=500)	Keep last 500 lines of filename.	0=Success 1=Error
[032]	sa.get_nb_cpu	Return number of CPUs	4
[033]	sa.get_nb_core_per_socket()	Return number of core per socket	2
[034]	sa.get_nb_thread_per_core()	Return number of threads per core	2
[035]	sa.get_nb_socket()	Return number of socket	1
[036]	sa.silentremove('file')	Silent file delete (no msg, no err)	0
[037]	sa.touch_file('filename')	Create an empty file	0=Success 1=Error

[038]	sa.db_connect('sadmin')	Open connection to database	0=Success 1=Error
[039]	sa.db_close(conn,cur)	Close connection to database	0=Success 1=Error

02) Variables that influence library behavior, in SADMIN Code Section of your code
We recommend, to set these variables prior to calling 'sa.sadm_start()'.

[001]	sa.ver	Program version number	3.27
[002]	sa.desc	Program description	Describe 'sadmlib_std_demo.py' here.
[003]	sa.root_only	Program can only be run by 'root'	False
[004]	sa.server_only	Program can only run on SADMIN server	False
[005]	sa.sadmgrp_only	Run only if part of SADMIN Grp or root	False
[006]	sa.multiple_exec	Can run more than 1 copy simultaneously	False
[007]	sa.quiet	Quiet False=ErrNo+Mess True=OnlyErrNo	False
[008]	sa.use_rch	Save execution data to '.rch' file	False
[009]	sa.log_type	Set Output to [S]creen [L]og [B]oth	B
[010]	sa.log_append	True=Append to log, False=New log	False
[011]	sa.log_header	Generate header in log	True
[012]	sa.log_footer	Generate footer in log	True
[013]	sa.db_used	Need Access to SADMIN Database ?	False
[014]	sa.db_name	Database Name (Default:'sadmin')	sadmin
[015]	sa.sadm_pid_timeout	PID file default TimeToLive (Sec)	14400
[016]	sa.sadm_lock_timeout	Maximun nb. sec. a host can be lock	3600
[017]	sa.sadm_max_rchline	Trim rch file to this max. of lines	50 lines
[018]	sa.sadm_max_logline	Trim log to this maximum of lines	500 lines
[019]	sa.sadm_mail_addr	SADMIN Administrator Email(s)	brucetalbot95@gmail.com
[020]	sa.sadm_alert_type	0=NoMail 1=OnError 3=OnSuccess 4=All	1
[021]	sa.sadm_alert_repeat	0=Alert once, 14400=4hrs before alert repeat	0
[022]	sa.sadm_alert_group	Error Group (Default Group)	default
[023]	sa.sadm_warning_group	Warning Group Name	warning
[024]	sa.sadm_info_group	Info Group Name	info

02) These variables are set in the Library and are available for you to use.
But shouldn't have to change.

[025]	sa.pn	Pgm. name with extension	sadmlib_std_demo.py
[026]	sa.inst	Pgm. name without extension	sadmlib_std_demo
[027]	sa.username	Current user name	root
[028]	sa.hostname	Current Host Name	bilbo
[029]	sa.pid	Current Process ID	347998
[030]	sa.errno	Error No. returned by function called	0
[031]	sa.errmsg	Error Mess. returned by function called	
[032]	sa.db_conn	Database connector	None
[033]	sa.db_cur	Database cursor	None

[034]	sa.db_name	Database name	sadmin
[035]	debug	Debug Level 0-9 (Incr. Verbose)	0
[036]	exit_code	Script Exit Return Code	0
[037]	current_time	Current date & Time	2026.06.23 07:23:17
[038]	cmd_ssh_full	SSH cmd to client	/usr/bin/ssh -qnp 32

03) Python Library - Overview of the 'start()' and 'stop()' functions.

Function 'start()'

The 'start()' function basically initialize the SADMIN environment.

When you call 'start()', it will only come back to caller, only if everything went OK, Otherwise, it will advise the user of the error and exit(1).

- If 'db_used' is True, it will create a connection to the Database and return a connection (db_conn) and cursor (db_cur) objects.
Example: '(db_conn,db_cur) = sa.start()'
- If 'sa.db_used' is False, then it will return None for both 'sa_conn' and 'sadb_cur'.

Here a summary of the different things the 'start()' function does :

- 1) Make sure \$SADMIN directories and sub-directories exist and have proper permissions.
- 2) If 'log_append' is True, it open standard/error log in append mode, else write mode.
- 3) If 'log_header' is True, write the log header.
- 4) If 'root_only' is True and the current user is not root, show error message and exit(1).
- 5) If 'server_only' is True and you are not on the SADMIN server, show error message and exit(1).
- 6) If 'sadmgrp_only' is 'True', then current user must be part of the SADMIN group (unless root)
- 7) If 'db_used' is True, but you are not on the SADMIN Server, show error message and exit(1).
- 8) If lock_status() is True and running on the SADMIN server, issue message and exit(1)
If the creation of the lock was done more than 'lock_timeout' seconds, the lock file is remove.
- 9) If PID file 'pid_file' exist and 'sa.multiple_exec' is True, continue normal execution
If PID file exist and execution time (sec) is less than the 'pid_timeout', show error mess. and exit(1).
If PID file exist and execution time (sec) exceed the 'pid_timeout' a new 'pid_file' is created and execution is resume.
- 10) If 'use_rch' is True, add line in 'rch' file with code '2' and starting time of your program.
- 11) If 'db_used' is True, open connection to database and return connection and cursor objects.
If not on SADMIN system, show error message and exit(1).

Function 'stop()'

This function accept one parameter, either a 0 for Success or a 1 for Error.

This should be the one of the last function called at the end of your program.

What this function does:

- 1) Calculate execution Time.
- 2) If 'use_rch = True', update the rch file (End Time & Elapse Time ...).
- 3) Validate & determine the alert group name (sadm_alert_group) use in rch file.
- 4) If 'db_used' is True and we are on the SADMIN server, close the database connection.
- 5) If the error log file (.elog) is empty, delete it.
- 6) Delete the PID file of the script (pid_file).
- 7) If 'log_footer' is True, write the log footer.
- 8) Close log and error log files.
- 9) If 'sa.max_logline' is not zero, trim the log according to user choice in 'sa.max_logline'.
- 10) If 'sa.max_rchline' is not zero, trim the 'rch' according to user choice in 'sa.max_rchline'.
- 11) Set permission and owner/group to log and rch files.
- 12) If on the SADMIN server, then rch and log are immediatly web central directory.

4) SADMIN configuration file - List of variables available to developers.

----- General Section -----

[001]	sa.sadm_server	SADMIN server name (FQDN)	sherlock.maison.ca
[002]	sa.sadm_host_type	SADMIN [C]lient or [S]erver	C
[003]	sa.sadm_cie_name	Your Company name	The Batcave
[004]	sa.sadm_domain	Server creation default domain	maison.ca
[005]	sa.sadm_user	SADMIN User Name	sadmin
[006]	sa.sadm_group	SADMIN Group Name	sadmin
[007]	sa.sadm_pwd_random	Daily change password of '\$SADM_USER'	N
[008]	sa.sadm_pid_timeout	PID file default TimeToLive (Sec)	14400
[009]	sa.sadm_lock_timeout	Maximun nb. sec. a host can be lock	3600

----- Database Section -----

[010]	sa.sadm_dbname	SADMIN Database Name	sadmin
[011]	sa.sadm_dbhost	SADMIN Database Host	localhost
[012]	sa.sadm_dbport	SADMIN Database Host TCP Port	3306
[013]	sa.sadm_rw_dbuser	SADMIN Database Read/Write User	sadmin
[014]	sa.sadm_rw_dbpwd	SADMIN Database Read/Write User Pwd	*Hidden*
[015]	sa.sadm_ro_dbuser	SADMIN Database Read Only User	squery
[016]	sa.sadm_ro_dbpwd	SADMIN Database Read Only User Pwd	*Hidden*

----- Web Interface Section -----

[017]	sa.sadm_www_user	User that Run the Web Server	apache
[018]	sa.sadm_www_group	Group that Run the Web Server	apache

----- Email Section -----

[019]	sa.sadm_mail_addr	SADMIN SysAdmin Email(s)	brucetalbot95@gmail.com
[020]	sa.sadm_smtp_server	Your internet smtp server	smtp.gmail.com
[021]	sa.sadm_smtp_port	Your internet smtp server port	587

[022]	sa.sadm_smtp_sender	Your internet smtp email address	brucetalbot95@gmail.com
[023]	sa.sadm_gmpw	Your internet smtp email password	*Hidden*
----- Monitoring Section -----			
[024]	sa.sadm_alert_type	0=NoMail 1=OnError 3=OnSuccess 4=All	1
[025]	sa.sadm_alert_group	Error Group (Default Group)	default
[026]	sa.sadm_warning_group	Warning Group Name	warning
[027]	sa.sadm_info_group	Info Group Name	info
[028]	sa.sadm_ssh_port	Default SSH Port to talk with client	32
[029]	sa.sadm_monitor_update_interval	Monitor web page refresh rate (Sec)	60 Seconds
[030]	sa.sadm_monitor_recent_count	Monitor web page nb. recent scripts	5
[031]	sa.sadm_monitor_recent_exclude	Monitor web page exclude list	sadm_nmon_watcher
[032]	sa.sadm_email_startup	Send email to SysAdmin on startup	N
[033]	sa.sadm_email_shutdown	Send email to SysAdmin on shutdown	N
[034]	sa.sadm_textbelt_key	TextBelt.com API Key	*Hidden*
[035]	sa.sadm_textbelt_url	TextBelt.com API URL	https://textbelt.com/text
----- Files and Logs pruning Section -----			
[036]	sa.sadm_nmon_keepdays	Nb. of days to keep .nmon perf. file	10 days
[037]	sa.sadm_rch_keepdays	Nb. days to keep unmodified .rch file	35 days
[038]	sa.sadm_log_keepdays	Nb. days to keep unmodified .log file	35 days
[039]	sa.sadm_max_rchline	Trim rch file to this max. of lines	50 lines
[040]	sa.sadm_max_logline	Trim log to this maximum of lines	500 lines
[041]	sa.sadm_days_history	Days to keep alert in History file	14 lines
[042]	sa.sadm_max_arc_line	Max. lines in alert in History file	1000 lines
----- Subnet Network Scanner Section -----			
[043]	sa.sadm_network1	Network/Netmask 1 inv. IP/Name/Mac	192.168.1.0/24
[044]	sa.sadm_network2	Network/Netmask 2 inv. IP/Name/Mac	None
[045]	sa.sadm_network3	Network/Netmask 3 inv. IP/Name/Mac	None
[046]	sa.sadm_network4	Network/Netmask 4 inv. IP/Name/Mac	None
[047]	sa.sadm_network5	Network/Netmask 5 inv. IP/Name/Mac	None
----- ReaR Backup Section -----			
[048]	sa.sadm_rear_nfs_server	ReaR NFS Server IP or Name	lestrade.maison.ca
[049]	sa.sadm_rear_nfs_server_ver	ReaR NFS Server Version	3
[050]	sa.sadm_rear_nfs_mount_point	ReaR NFS Mount Point	/backup/backup_rear
[051]	sa.sadm_rear_backup_to_keep	ReaR NFS Backup - Nb. to keep	2 copies
[052]	sa.sadm_rear_backup_dif	ReaR alert cur vs prev size differ	25 %
[053]	sa.sadm_rear_backup_interval	ReaR alert if no backup for X days	14 days
[054]	sa.sadm_rear_backup_script	ReaR backup script name	sadm_rear_backup.sh
[055]	sa.sadm_rear_del_failed_backup	Delete failed backup	Y
[056]	sa.sadm_rear_batch_mode	Run backup in batch mode	N
[057]	sa.sadm_rear_batch_startup_time	Batch startup time	00:00
[058]	sa.sadm_rear_backup_concurrent	Concurrent rear backup process	1
----- Backup Section -----			
[059]	sa.sadm_backup_nfs_server	NFS Backup IP or Server Name	batnas.maison.ca

[060]	sa.sadm_backup_nfs_server_ver	NFS Backup Server Version	3
[061]	sa.sadm_backup_nfs_mount_point	NFS Backup Mount Point	/volume1/backup/backup_sadmin
[062]	sa.sadm_backup_dif	Backup alert cur vs prev size differ	40 %
[063]	sa.sadm_backup_interval	Backup alert if older than X days	1 days
[064]	sa.sadm_daily_backup_to_keep	Daily Backup to Keep	2 copies
[065]	sa.sadm_weekly_backup_to_keep	Weekly Backup to Keep	1 copies
[066]	sa.sadm_monthly_backup_to_keep	Monthly Backup to Keep	1 copies
[067]	sa.sadm_yearly_backup_to_keep	Yearly Backup to keep	1 copies
[068]	sa.sadm_weekly_backup_day	Weekly Backup Day (1=Mon,7=Sun)	5
[069]	sa.sadm_monthly_backup_date	Monthly Backup Date (1-28)	1
[070]	sa.sadm_yearly_backup_month	Yearly Backup Month (1-12)	12
[071]	sa.sadm_yearly_backup_date	Yearly Backup Date (1-31)	31
[072]	sa.sadm_backup_concurrent	Concurrent Backup Processes	1
[073]	sa.sadm_backup_batch_mode	Run backup in batch mode	N
[074]	sa.sadm_backup_batch_startup_time	Batch startup time	00:01
----- Virtual Machines Export Section -----			
[075]	sa.sadm_vm_export_nfs_server	NFS Export Server	batnas.maison.ca
[076]	sa.sadm_vm_export_nfs_server_ver	NFS Export Server Version	3
[077]	sa.sadm_vm_export_mount_point	NFS Export Mount Point	/volume1/backup/backup_vm/virtualbox_exp
orts			
[078]	sa.sadm_vm_export_dif	Export alert cur vs prev size differ	25 %
[079]	sa.sadm_vm_export_to_keep	Nb. of export to keep	2 copies
[080]	sa.sadm_vm_export_interval	Days without export before alert	21 days
[081]	sa.sadm_vm_export_alert	Issue an alert if interval reached	Y
[082]	sa.sadm_vm_user	User part of 'vboxusers' user group	jacques
[083]	sa.sadm_vm_stop_timeout	Max. seconds given for acpi shutdown	60 seconds
[084]	sa.sadm_vm_start_interval	Sec. to sleep between each VM start	30 seconds
[085]	sa.sadm_vm_export_batch_mode	Run start script in batch mode (Y/N)	N
[086]	sa.sadm_vm_export_batch_start_time	Start time for launch batch export	00:01
[087]	sa.sadm_vm_export_concurrent	Concurrent export process	1
----- System Update Section -----			
[088]	sa.sadm_osupdate_interval	System Update Interval	15 days
[089]	sa.sadm_osupdate_script	System Update Script	sadm_osupdate.sh
[090]	sa.sadm_osupdate_autoremove	Auto Remove Updates	N
[091]	sa.sadm_osupdate_flatpak	Flatpak Updates	N
[092]	sa.sadm_osupdate_snap	Snap Updates	N
[093]	sa.sadm_osupdate_reboot_needed	Reboot Needed	N
[094]	sa.sadm_osupdate_reboot_time	Reboot Time	240
[095]	sa.sadm_osupdate_lock	Lock Updates	Y
[096]	sa.sadm_osupdate_batch_mode	Batch Mode	N
[097]	sa.sadm_osupdate_batch_start_time	Batch Start Time	00:01
[098]	sa.sadm_osupdate_concurrent	Concurrent Update Process	1

5) Directories variables available to Developers

[001]	sa.dir_base	SADMIN Root Directory	/opt/sadmin
[002]	sa.dir_bin	SADMIN Scripts Directory	/opt/sadmin/bin
[003]	sa.dir_tmp	SADMIN Temporary file(s) Directory	/opt/sadmin/tmp
[004]	sa.dir_lib	SADMIN Shell & Python Library Dir.	/opt/sadmin/lib
[005]	sa.dir_log	SADMIN Script Log Directory	/opt/sadmin/log
[006]	sa.dir_cfg	SADMIN Configuration Directory	/opt/sadmin/cfg
[007]	sa.dir_sys	Server Startup/Shutdown Script Dir.	/opt/sadmin/sys
[008]	sa.dir_doc	SADMIN Documentation Directory	/opt/sadmin/doc
[009]	sa.dir_pkg	SADMIN Packages Directory	/opt/sadmin/pkg
[010]	sa.dir_dat	Server Data Directory	/opt/sadmin/dat
[011]	sa.dir_nmon	Server NMON - Data Collected Dir.	/opt/sadmin/dat/nmon
[012]	sa.dir_dr	Server Disaster Recovery Info Dir.	/opt/sadmin/dat/dr
[013]	sa.dir_rch	Server Return Code History Dir.	/opt/sadmin/dat/rch
[014]	sa.dir_net	Server Network Information Dir.	/opt/sadmin/dat/net
[015]	sa.dir_rpt	SYStem MONitor Report Directory	/opt/sadmin/dat/rpt
[016]	sa.dir_dbb	Database Backup Directory	/opt/sadmin/dat/dbb
[017]	sa.dir_setup	SADMIN Setup Directory.	/opt/sadmin/setup
[018]	sa.dir_usr	User/System specific directory	/opt/sadmin/usr
[019]	sa.dir_usr_bin	User/System specific bin/script Dir.	/opt/sadmin/usr/bin
[020]	sa.dir_usr_lib	User/System specific library Dir.	/opt/sadmin/usr/lib
[021]	sa.dir_usr_doc	User/System specific documentation	/opt/sadmin/usr/doc
[022]	sa.dir_usr_mon	User/System specific SysMon Scripts	/opt/sadmin/usr/mon
[023]	sa.dir_www	SADMIN Web Site Root Directory	/opt/sadmin/www
[024]	sa.dir_www_doc	SADMIN Web Site Root Directory	/opt/sadmin/www/doc
[025]	sa.dir_www_dat	SADMIN Web Site Systems Data Dir.	/opt/sadmin/www/dat
[026]	sa.dir_www_lib	SADMIN Web Site PHP Library Dir.	/opt/sadmin/www/lib
[027]	sa.dir_www_tmp	SADMIN Web Temp Working Directory	/opt/sadmin/www/tmp
[028]	sa.dir_www_perf	Web system performance Graph Dir.	/opt/sadmin/www/tmp/perf

6) SADMIN File names use and set by the Python library, for you to use

----- File Name Aliases Variables -----

[001]	sa.pid_file	Current script PID file	/opt/sadmin/tmp/sadmlib_std_demo.pid
[002]	sa.cfg_file	SADMIN configuration file	/opt/sadmin/cfg/sadmin.cfg
[003]	sa.cfg_hidden	SADMIN configuration template	/opt/sadmin/cfg/.sadmin.cfg
[004]	sa.alert_file	Alert group definition file	/opt/sadmin/cfg/alert_group.cfg
[005]	sa.alert_init	Alert group template file	/opt/sadmin/cfg/.alert_group.cfg
[006]	sa.alert_hist	Alert History file	/opt/sadmin/cfg/alert_history.txt
[007]	sa.alert_hini	Alert History template file	/opt/sadmin/cfg/.alert_history.txt
[008]	sa.tmp_file1	User usable Temp Work File 1	/opt/sadmin/tmp/sadmlib_std_demo_1.34799
8			
[009]	sa.tmp_file2	User usable Temp Work File 2	/opt/sadmin/tmp/sadmlib_std_demo_2.34799

[010] sa.tmp_file3 8	User usable Temp Work File 3	/opt/sadmin/tmp/sadmlib_std_demo_3.34799
[011] sa.log_file og	Script Log File	/opt/sadmin/log/bilbo_sadmlib_std_demo.1
[012] sa.rch_file mo.rch	Script Return Code History File	/opt/sadmin/dat/rch/bilbo_sadmlib_std_de
[013] sa.dbpass_file	SADMIN Database User Password File	/opt/sadmin/cfg/.dbpass
[014] sa.rpt_file	[SYS]tem [MON]itor report file	/opt/sadmin/dat/rpt/bilbo.rpt
[015] sa.backup_list	Backup list file name	/opt/sadmin/cfg/backup_list.txt
[016] sa.backup_list_init	Backup list template file	/opt/sadmin/cfg/.backup_list.txt
[017] sa.backup_exclude	Backup exclude list file name	/opt/sadmin/cfg/backup_exclude.txt
[018] sa.backup_exclude_init	Backup exclude template file	/opt/sadmin/cfg/.backup_exclude.txt

7) Command Path set and use by SADMIN Python Library for more security.

[001] sa.cmd_dmidecode	Cmd. 'dmidecode', Get model & type	/usr/sbin/dmidecode
[002] sa.cmd_bc	Cmd. 'bc', Do some Math.	/usr/bin/bc
[003] sa.cmd_fdisk	Cmd. 'fdisk', Get Partition Info	/usr/sbin/fdisk
[004] sa.cmd_which	Cmd. 'which', Get Command location	/usr/bin/which
[005] sa.cmd_perl	Cmd. 'perl', epoch time Calc.	/usr/bin/perl
[006] sa.cmd_mutt	Cmd. 'mutt', Used to Send Email	/usr/bin/mutt
[007] sa.cmd_curl	Cmd. 'curl', To send alert to Slack	/usr/bin/curl
[008] sa.cmd_lscpu	Cmd. 'lscpu', Socket & thread info	/usr/bin/lscpu
[009] sa.cmd_nmon	Cmd. 'nmon', Collect Perf Statistic	/usr/bin/nmon
[010] sa.cmd_parted	Cmd. 'parted', Get Disk Real Size	/usr/sbin/parted
[011] sa.cmd_ethtool	Cmd. 'ethtool', Get System IP Info	/usr/sbin/ethtool
[012] sa.cmd_rrdtool	Cmd. 'rrdtool' to produce graph	/usr/bin/rrdtool
[013] sa.cmd_lsb_release	Cmd. 'lsb_release' to get dist. info	/usr/bin/lsb_release
[014] sa.cmd_inxi	Cmd. 'inxi' binary location	/usr/bin/inxi
[015] sa.cmd_ssh	Cmd. 'ssh', SSH to SADMIN client	/usr/bin/ssh
